

Top 10 Most-Downloaded Claude Code Plugins (2026)

Note on data: Install counts come from different snapshots (March–July 2026) and different sources (Anthropic's official directory, GitHub stars, third-party trackers), so figures don't always agree across sources. For a live, daily-updated ranking, see pluginmarketplace.ai/best-claude-plugins.

1. Frontend Design

Type: Anthropic official The most-installed plugin in the official directory. Wires Claude into design tokens, screenshots, and layout reasoning so UI output looks intentional rather than generic.

- ~277,000 installs (mid-2026 snapshot) / ~829,000 installs (June 1, 2026 snapshot, source-dependent)

2. Superpowers

Type: Community (obra/superpowers) A full plan → spec → test development workflow — effectively a methodology packaged as a plugin.

- ~248k GitHub stars; ~752,000 installs (June 1, 2026)
- Install: `/plugin marketplace add obra/superpowers-marketplace` then `/plugin install superpowers@superpowers-marketplace`

3. Context7

Type: Community/MCP-backed Injects live, version-specific library documentation into context instead of relying on stale training data. Popular for fast-moving stacks (Next.js, Tailwind, LangChain, Vercel AI SDK).

- ~348,660 installs (June 1, 2026)

4. GitHub

Type: Anthropic partner plugin Repository context, PR workflows, and commit history directly in Claude Code.

5. Playwright

Type: Anthropic partner plugin Browser automation and E2E test workflows.

6. LSP Language Server Pack

Type: Anthropic official 12 language servers (TypeScript, Python, Rust, Go, Java, and more) for IDE-grade code intelligence.

7. Claude Mem

Type: Community Persistent memory across sessions — frequently cited among the most popular community plugins.

8. Caveman

Type: Community Token-saving terse output mode; measurable reduction in token spend on real work.

9. PR Review Toolkit

Type: Anthropic official Automated PR review with confidence scoring across tests, types, regressions, and code quality.

10. Chrome DevTools MCP

Type: Community/MCP-backed Real-browser debugging; frequently paired with Frontend Design to verify rendered output.

Quick install reference

```
/plugin marketplace add anthropics/claude-plugins-official  
/plugin install <plugin-name>@claude-plugins-official
```

For community plugins, add the specific marketplace first (see each plugin's own install command above).

Caution

Anthropic's own docs warn that plugins and marketplaces can execute code with your user privileges — treat them like dependencies, especially any that include hooks, shell commands, browser automation, or authenticated MCP servers.
